

scQtWorker::doStart

scQtWorker::setNewState

scQtWorker::~~scQtWorker

scQtWorker::_sendMessage

```
graph LR; A[scQtWorker::doStart] --> D[scQtWorker::_sendMessage]; B[scQtWorker::setNewState] --> D; C[scQtWorker::~~scQtWorker] --> D;
```

The diagram illustrates a dependency or call relationship. On the left, three white rectangular boxes are stacked vertically, each containing a function name: 'scQtWorker::doStart' at the top, 'scQtWorker::setNewState' in the middle, and 'scQtWorker::~~scQtWorker' at the bottom. On the right, a single gray rectangular box contains the function name 'scQtWorker::_sendMessage'. Three blue arrows originate from the right side of each white box and point towards the left side of the gray box, indicating that each of the three functions on the left calls or depends on the function on the right.
