

tlm::tlm\_base\_initiator  
\_socket::operator()

tlm::tlm\_base\_initiator  
\_socket::operator()

tlm::tlm\_base\_initiator  
\_socket::operator()

tlm::tlm\_base\_initiator  
\_socket::bind

```
graph LR; A[tlm::tlm_base_initiator_socket::operator()] --> D[tlm::tlm_base_initiator_socket::bind]; B[tlm::tlm_base_initiator_socket::operator()] --> D; C[tlm::tlm_base_initiator_socket::operator()] --> D;
```

The diagram illustrates a mapping or binding process. On the left, there are three identical boxes, each containing the text 'tlm::tlm\_base\_initiator\_socket::operator()'. On the right, there is a single box containing 'tlm::tlm\_base\_initiator\_socket::bind'. Three blue arrows originate from the right side of each box on the left and point towards the left side of the box on the right, indicating that the 'operator()' function is being associated with or mapped to the 'bind' function.
