```
graph LR; A[sc_dt::sc_fxnum::is_neg] --> D[sc_dt::scfx_rep::is_neg]; B[sc_dt::sc_fxval::is_neg] --> D; C[sc_dt::scfx_rep::toggle_tc] --> D;
```

The diagram illustrates a logical relationship where three separate inputs converge into a single output. On the left, three white rectangular boxes are stacked vertically. Each box contains a text label representing a variable or function. Blue arrows originate from the right side of each of these three boxes and point towards a single, larger gray rectangular box on the right. This gray box also contains a text label. The arrows indicate that the output of the gray box is a function of the three inputs from the white boxes.
