

```
sc_core::sc_vector  
::cbegin
```

A diagram illustrating a C++ range-comprehension operation. It consists of two rectangular boxes connected by a blue arrow pointing from left to right. The left box is shaded gray and contains the code `sc_core::sc_vector::cbegin`. The right box is white and contains the code `sc_core::sc_vector_base::begin`. The blue arrow indicates that the `cbegin` function of `sc_core::sc_vector` is being called, which likely returns a reference to the `begin` function of its base class `sc_core::sc_vector_base`.

```
sc_core::sc_vector  
_base::begin
```
