

`std::true_type`

```
graph BT; A[is_boolean< bool >] --> B[std::true_type];
```

The diagram illustrates a relationship between two C++ types. At the bottom, a gray rectangular box contains the text `is_boolean< bool >`. Two blue arrows originate from the top of this box and point upwards to a white rectangular box at the top, which contains the text `std::true_type`. This visualizes that `is_boolean< bool >` inherits from or is a specialization of `std::true_type`.

`is_boolean< bool >`
