

sc_dt::sc_fix::operator~

sc_dt::sc_ufix::operator~

sc_dt::sc_fxnum::get_bit

```
graph LR; A[sc_dt::sc_fix::operator~] --> C[sc_dt::sc_fxnum::get_bit]; B[sc_dt::sc_ufix::operator~] --> C;
```

The diagram illustrates a relationship between three functions. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'sc_dt::sc_fix::operator~' and the bottom box contains 'sc_dt::sc_ufix::operator~'. On the right, there is a gray rectangular box with a black border containing the text 'sc_dt::sc_fxnum::get_bit'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both 'operator~' functions delegate or call the 'get_bit' function.
